Warm Up

11/30/18

1. Solve:
$$2(3x + 4y = 24)$$

$$6x + 8y = 24$$

$$-6x + 8y = -48$$

$$+ 6x + 8y = 24$$

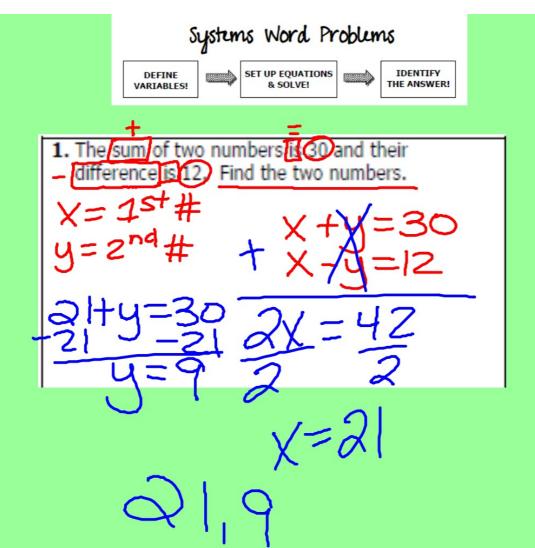

$$0 = -48$$

$$0 = -24$$

2. Solve: -4x + 8 > 29 -5 - 5 -4x > 24 -4

3. Solve for y. $\begin{array}{r}
3x - 2y < -26 \\
-3x - 3x \\
-2y < -3x - 24 \\
-2 -2 -2
\end{array}$ $\begin{array}{r}
-3x - 24 \\
-2 -2 -2
\end{array}$ $\begin{array}{r}
4 > 3 \times 12 \\
-2 \times 12
\end{array}$

SYSTEMS APPLICATION

2. The sum of two numbers is 24 and their difference is 2. What are the numbers?

$$X = 1^{S^{+}} \#$$

 $Y = 2^{nd} \#$

$$X+y=24$$

 $X-y=2$

3. The difference between two numbers is 9. The first rymber plus twice the other number is 27. Find the two numbers.

$$X = 1^{S+} #$$
 $y = 2^{m} #$

$$X-y=9$$

$$X+2y=27$$

 The sum of two numbers is 36. Twice the first number minus the second is 6. Find the numbers.

$$X = 1^{S+} \# X + y = 36$$

 $y = 2^{nd} \# 2X - y = 6$

The sum of two numbers is 20. The difference between three times the first number and twice the second is 40. Find the two numbers.

7. The cost of 3 boxes of envelopes and 4 boxes of notebook paper is \$13.25. Two boxes of envelopes and 6 boxes of notebook paper cost \$17. Find the cost of each.

$$X =$$
\$ per box of envelopes
 $y =$ \$ per box of paper
 $3x + 4y = 13.25$
 $2x + 6y = 17.00$

$$X = $$$
 per orange
 $y = $$ per apple
 $-5 (12X + 7y = 5.36)$
 $-7 (8X + 5y = 3.68)$
 $+60X - 35y = -26.80$
 $+56X + 35y = 25.76$
 $-4X = -1.04$

Gabby and Sydney bought some pens and pencils. Gabby bought 4 pens and 5 pencils for \$6.71. Sydney bought 5 pens and 3 pencils for \$7.12. Find the cost of each.

10. At a sale on winter clothing, Cody bought two pairs of gloves and four hats for \$43.00. Tori bought two pairs of gloves and two hats for \$30.00. Find the cost of each.

$$X = cost per glove set$$
 $Y = cost per hat$

11. A garden supply store sells two types of lawn mowers. The smaller mower costs \$249.99 and the larger mower cost \$329.99. If 30 total mowers were sold and the total sales for a given year was \$8379.70, find how many of each type were sold.

$$X = \# \text{ of Small mower}$$

 $y = \# \text{ of large mower}$
 $X + y = 30$
 $249.99x + 329.99y = 8379.70$

12. The Town Recreation Department ordered a total of 100 baseballs and bats for the summer baseball camp. Baseballs cost \$4.50 each and bats cost \$20 each. The total purchase was \$822. How many of each item was ordered?

$$x = baseball S$$

 $y = bat S$
 $x + y = 100$
 $4.50x + 20y = 822$

13. A group of 40 children attended a baseball game on a field trip. Each child received either a hot dog or bag of popcorn. Hot dogs were \$2.25 and popcorn was \$1.75. If the total bill was \$83.50, how many hotdogs and bags of popcorn were purchased?

$$X = hot dogs$$
 $Y = Popcorn bags$

$$-2.25(X + y = 40)$$

$$-2.25X - 2.25y = -90$$

 $2.25X + 1.75y = 83.50$

$$-0.50y = -6.50$$

$$-0.50$$

$$4 = 13$$

14. One night a theater sold 548 movie tickets. An adult's ticket costs \$6.50 and a child's ticket cost \$3.50. In all, \$2881 was taken in. How many of each kind of ticket were sold?

$$X = # \text{ of } adv # \text{ trickets}$$

 $Y = # \text{ of } child \text{ trickets}$
 $X + y = 548$
 $6.50X + 3.50y = 2881$

15. Adult tickets for the school musical sold for \$3.50 and student tickets sold for \$2.50. On a given night, 321 tickets were sold for \$937.50. How many of each kind of ticket were sold?

$$X + y = 321$$

3.50 $X + 2.50y = 937.50$

16. A collection of dimes and nickels is worth \$3.30. If there are 42 coins in all, how many of each kind of coin are there?

$$d = dines_{24} n = nickels$$

$$-0.10(d + n = 42)$$

$$0.10d + 0.05n = 3.30$$

$$d + 18 = 42$$

$$+ 0.10d - 0.10n = -4.20$$

$$0.10d + 0.05n = 3.30$$

$$-0.05n = -0.90$$

$$-0.05 = -0.05$$

$$n = 18$$

17. Mary has a collection of nickels and quarters for a total value of \$4.90. If she has 42 coins total, how many of each kind are there?

n=nickels -0.05(n+g=42) g=gvarters 0.05n+0.25g=4.90 + -0.05n-0.05g=-2.10 + 0.20g=2.8014 granters 9-1428 nickels
